Proper Insulation Installation Form

Per WMC title 8, Chapter 15 all residential projects shall provide verification of insulation installation; completion of this checklist satisfies the requirement.

Checklist:

- Insulation shall be cut to fit around wiring and plumbing without compression
- Insulation shall be placed between the sheathing and the rear of electrical boxes without compression
- Insulation shall be cut to fit around junction boxes
- Insulation shall be cut to fit properly - There should be no gaps, nor should insulation be doubled over or compressed
- Facing shall be placed toward living space
- Narrow Spaces at windows, between studs at corners, and at the intersections of partitions and wall shall be filled with small pieces of insulation; care should be taken not to compress the insulation

** For insulation installed by specialty contractor, such as blown cellulous, verification form or other proof of proper insulation installation is allowed.

*** For a HERS Rating third party verification is required
